Hula print cards

Contents

Pages 2-11: QR codes 0-9. Pages 12-21: number labels 0-9. Pages 22-25: arrow labels.

Print settings

Print at 100% / Actual size, not Fit to page. Each card should measure 20 cm across.

Use matte paper or card, then glue it to stiff board so it stays flat.

QR cards: keep about 2.3 cm of white around the black square. Label cards: cut along the black edge.

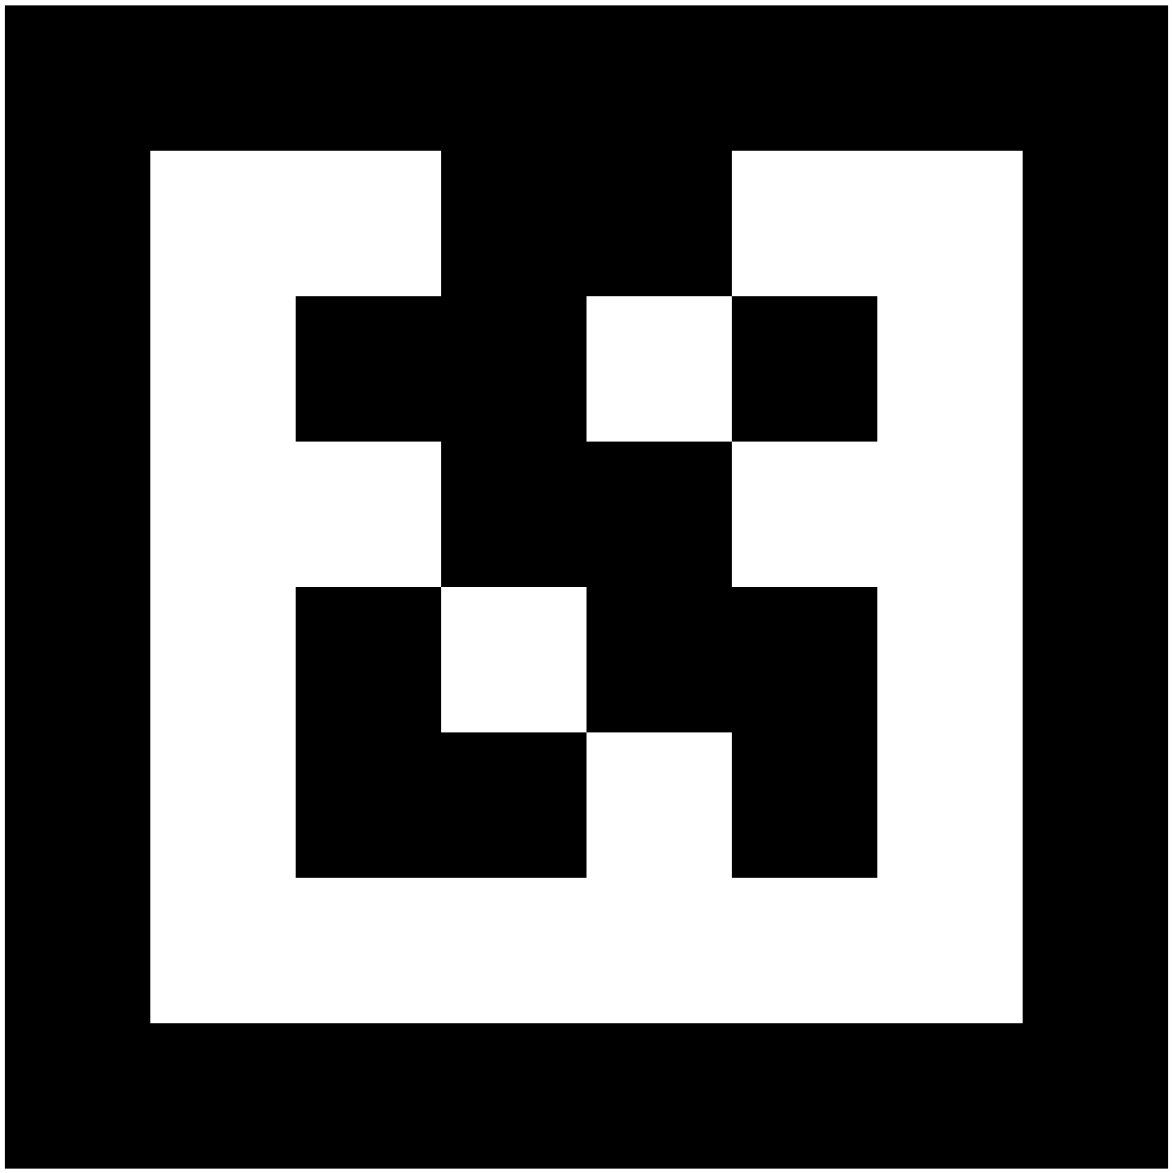

Test before printing a full set

These cards have not been tested on a drone.

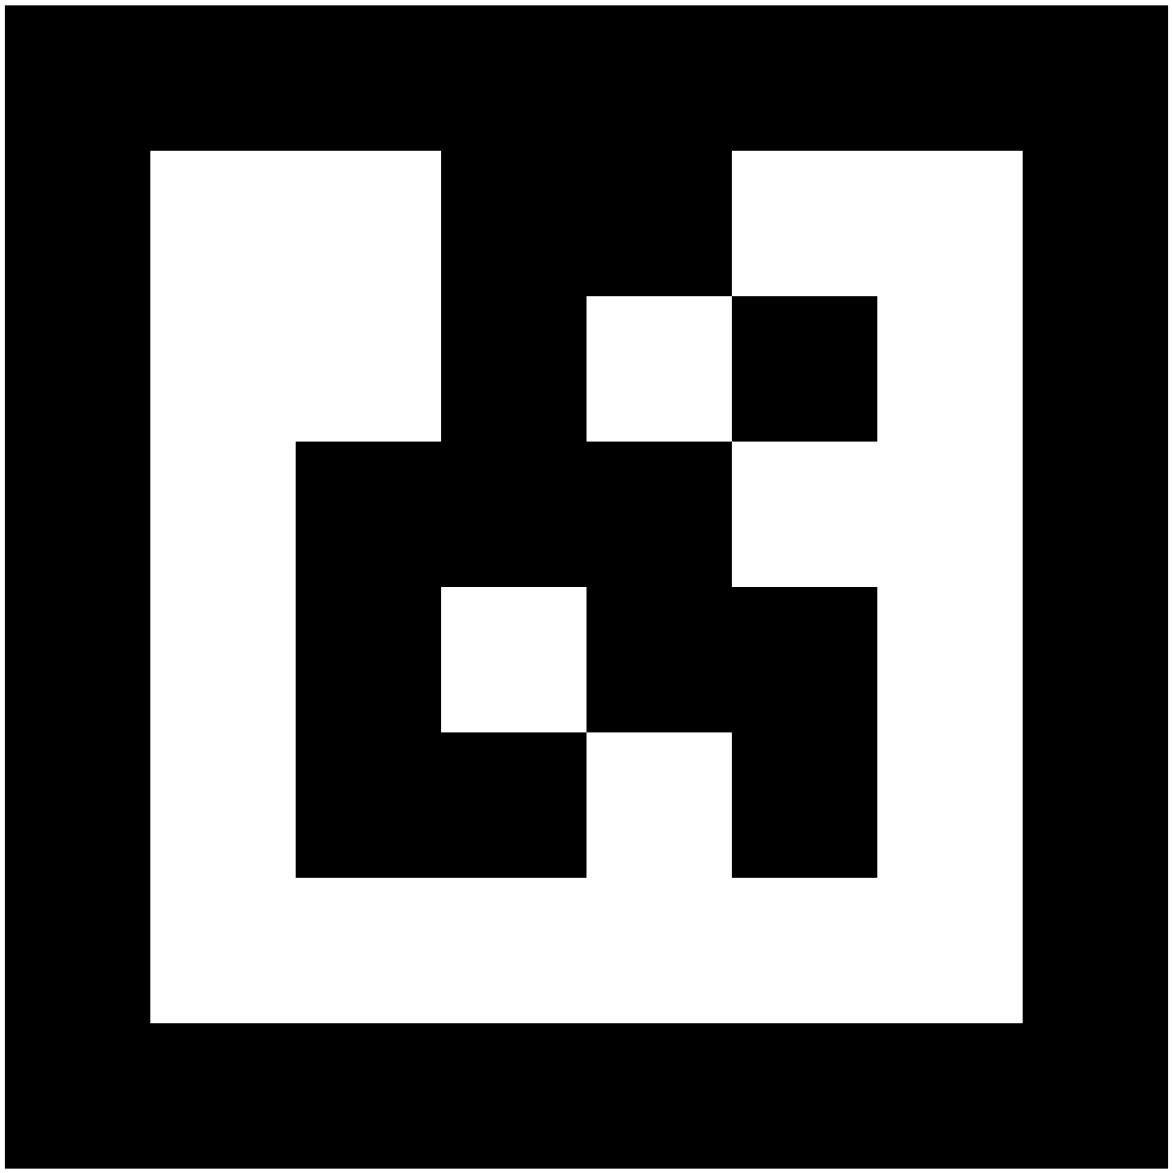

QR codes follow the drone firmware's pattern, but their size is an estimate. Compare with your kit card.

The labels are based on small pictures in the manual. Try QR 1 and one label first.

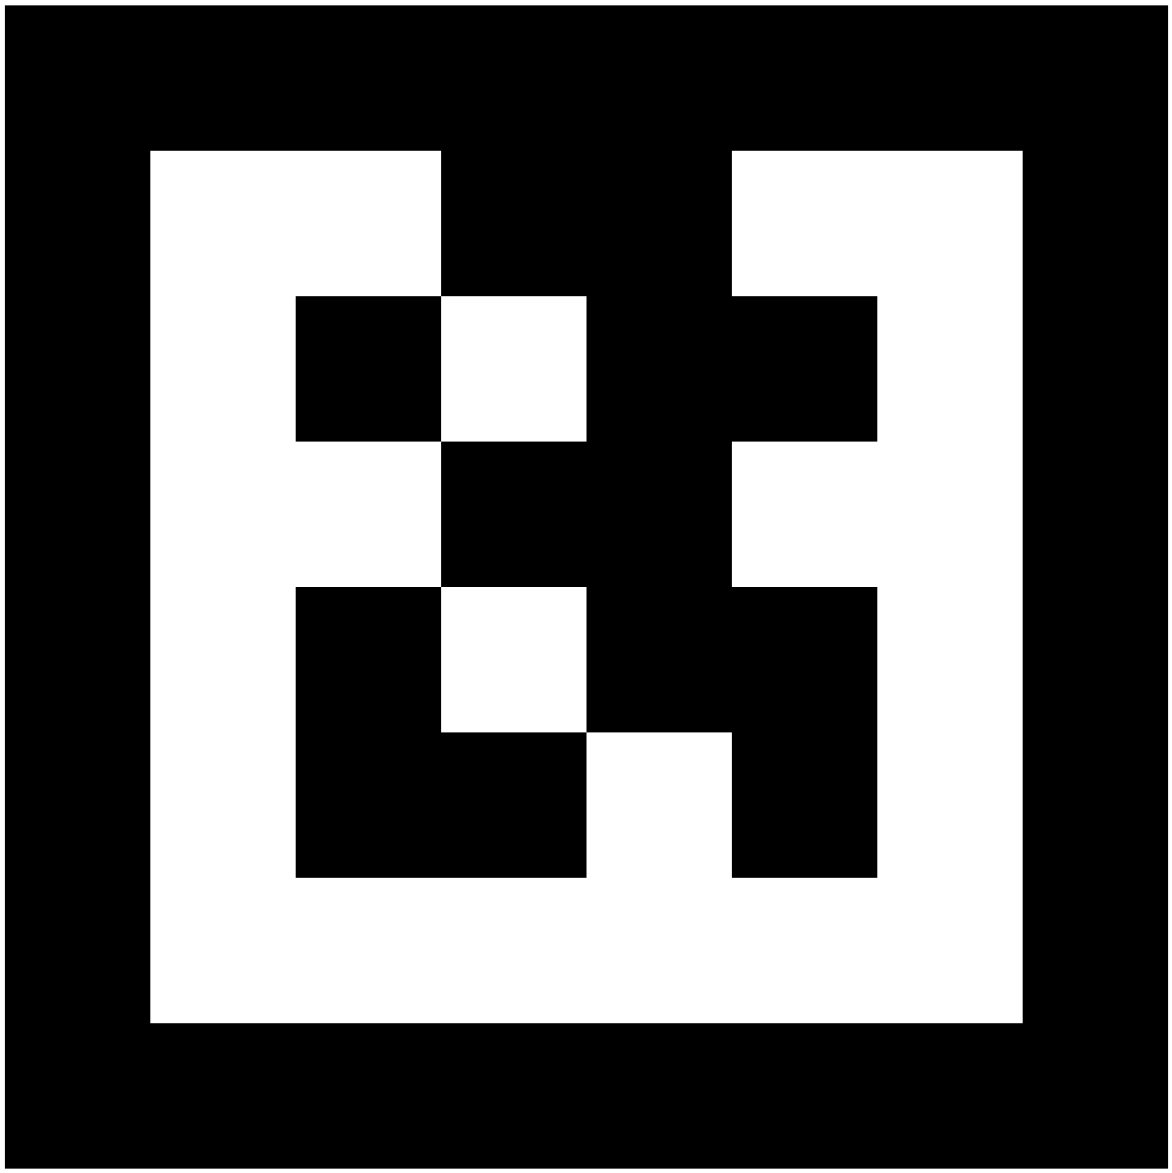

Use Recognize QR code 1 or Recognize label, then check that the result equals 1.
